-

Projects

1.Title: SucroSense

- Discription: SucroSense is a web-based system that predicts sugar recovery from sugarcane juice. It uses a machine learning model trained on Schmitz's Table to correct brix and pol based on temperature. By entering observed values, users get corrected readings and accurate sugar recovery results through a clean and easy interface.
- Role: Backend(Training ML model , define Routes).

2.Title: Student Data Management System

- Discription : This project is a web-based Student Data Management System designed to store, manage, and organize student information efficiently. The system allows users to add, update, delete, and view student details such as name, roll number, course, and attendance. It includes an automated alert feature that sends a message to parents when a student's attendance falls below 85%.
 - Role : Creating User Interface
-

Technical skills

- Frontend : HTML, CSS, JS, REACT
 - Backend:Node,Express
 - Database:SQL,MongoDB
 - Programming: Java
 - Core Subject : OS, DBMS
-
